

Harvest Availability and Scenario Report

Which fish can we sell now without undermining December-February supply?

4,389 fish / 975 kg available now at > 150 g (2D, 222 g)	3 harvests 3D sold 2,487 fish at 110-134 g in Sep	50,876 kg baseline Dec-Feb supply (existing stock)	130,329 kg baseline harvest of existing stock at 400 g	Not recorded broodstock / reserved stock

Baseline = draft plan rev 6 (model v2, harvest at 400 g). Early sale = first date the model reaches 250 g (the cycle target on older batches); fish weigh 250 g, so biomass is lower than at 400 g. Delayed growth = baseline shifted by the time each cage needs to grow from its measured ABW to the plan's assumed ABW at its latest measured SGR (capped at 90 days; 60 days where no usable growth rate). These are scenarios, not forecasts.

Harvestable biomass by month, existing stock only (kg)

Month	Baseline (400 g)	Early sale (250 g)	Delayed growth (400 g, later)
2026-10	0	1,087	0
2026-11	0	2,987	0
2026-12	1,643	29,771	1,643
2027-01	23,306	20,730	3,451
2027-02	25,927	8,943	6,751
2027-03	31,082	22,077	53,031
2027-04	13,512	1,087	30,594
2027-05	33,229	0	27,318
2027-06	1,630	0	1,630
TOTAL	130,329	86,682	124,418

Harvest kg by month: baseline (teal), early sale (amber), delayed growth (grey)

Sellable now vs December-February supply

Question	Answer from recorded data and the plan
What can be sold today?	2D holds 4,389 fish at 222 g (about 975 kg). 2C (132 g, 9,582 fish) and 3D (116 g, 2,964 fish; already being partially harvested at 110-134 g) are the next largest.
Does selling early undermine Dec-Feb supply?	Baseline Dec-Feb supply is 50,876 kg (1,643 / 23,306 / 25,927 kg). Early sale at 250 g brings 29,771 kg into Dec and leaves Feb at 8,943 kg; Dec-Feb totals 38,714 kg, but the existing stock yields 86,682 kg instead of 130,329 kg (33% less) because the fish are sold smaller.
How exposed is the plan to slow growth?	Measured ABW is below plan in 15 of 16 cages. If each cage needs the extra time estimated above, Dec-Feb supply falls to 11,845 kg (77% below baseline) and the weight moves into Mar-May 2027.
Reserved broodstock	Not recorded: no stock-purpose field. Broodstock to keep back must be set before any sale.
Planned partial harvests	Only recorded partial harvests exist (3D: 753, 989, 745 fish on 16, 19 and 29 Sep); no future partial harvest is planned in the draft.
