

Feed Efficiency and FCR Explanation Report

Is poor FCR a feeding problem, stock loss or a data issue?

This report explains the ratios; it does not present them as verified results. Biomass is book fish x sampled ABW (sample sizes 100-500). Mortality weight is not deducted, and ABW measurement error moves the ratio materially (+/-5 g ABW on a 40 g fish is a 12% swing in biomass).

Active grow-out (grow-out cages)

Batch	Feed kg (window)	Opening biomass kg	Closing biomass kg	Harvest kg	Biomass gain kg	eFCR window	Feed kg (cumulative)	eFCR cumulative	Reading / flag
02.26aK	1,705	2,424	3,081	0	657.2	2.59	5,404	1.79	High (>2.2): check sample size, stock loss and feed records
02.26b	670	1,734	2,241	1.9	508.3	1.32	3,015	1.36	OK - indicative

Nursing / small fish

Batch	Feed kg (window)	Opening biomass kg	Closing biomass kg	Harvest kg	Biomass gain kg	eFCR window	Feed kg (cumulative)	eFCR cumulative	Reading / flag
03.26aK	927	1,285	1,927	0	642.6	1.44	2,478	1.30	OK - indicative
03.26b	243	437	345	206.2	114.6	2.12	936	1.85	OK - indicative
03.26c	748	1,049	1,553	0	503.6	1.48	2,129	1.39	OK - indicative
05.26aK	586	801	1,194	0	393.4	1.49	1,638	1.46	OK - indicative
05.26cK	551	754	1,022	0	267.9	2.06	1,650	1.74	OK - indicative
06.26a	457	559	908	0	349.3	1.31	982	1.17	OK - indicative
07.26a	514	352	654	0	301.2	1.71	911	1.72	OK - indicative
07.26b	222	155	326	0	170.5	1.30	348	1.32	OK - indicative

Newly stocked / insufficient data

Batch	Feed kg (window)	Opening biomass kg	Closing biomass kg	Harvest kg	Biomass gain kg	eFCR window	Feed kg (cumulative)	eFCR cumulative	Reading / flag
02.26cK	2,017	-	3,902	0	-	-	7,339	-	Negative cage balances and an 11,259-fish unaccounted loss
05.26b	260	-	542	0	-	-	802	-	Opening sample missing or stale (2B: sample 2026-07-23 (31 d old))
08.26	96	-	129	0.1	-	-	106	-	Stocked/restocked in or just before the window; no opening sample
09.26a	19	-	30	0	-	-	19	-	Stocked/restocked in or just before the window; no opening sample

How to read the ratios

Situation	Cause shown by the data	Batches
High eFCR with large deaths	Feed went to fish that later died or were lost; ratio overstated	02.26cK (2,024 deaths + 11,259 unaccounted loss) - not computed
High eFCR, small sample	Closing ABW from n=100 fish; 5 g error swings the ratio	02.26aK (2.59, n=100 at close)
Low eFCR (< 1.4)	Possible under-recorded feed or over-weighted sample; not credible until verified	02.26b (1.32), 07.26b (1.30), 06.26a (1.31)
No ratio possible	Missing opening sample, restocking in window, or new batch	05.26b, 08.26, 09.26a
Harvest in window	Harvest kg is added back to biomass gain; harvest records for small batches are mostly samples/culls	03.26b (1,742 fish, 206 kg), 08.26 (20 fish)

Plan model v2 expects a biological FCR rising from 1.239 to 1.881 over 1-400 g, calibrated to a harvest eFCR of 1.7. Broodstock and completed-batch groups are empty: no batch is recorded as broodstock and no 2026 batch has been closed.
