

Transfer and Grading Outcome Report

Which transfer practices reduce losses?

15 transfer events (Jun-Sep)	150,581 fish moved	11,259 fish booked lost on 28 Aug	3,021 deaths in 7 d after Jul-29 transfer into G1.D	Not recorded handling time / water quality
---------------------------------	-----------------------	--------------------------------------	--	---

Transfer and grading events (2026-06-01 to 2026-09-23)

Date	Type	Batch	From	To	Fish	Biomass kg	ABW g	Deaths same day	Deaths next 7 d	7-d % of fish moved	Operational note

2026-09-06	transfer	02.26cK	1C	G1.A	7,140	372	52.1	11	159	2.2%	-
2026-09-10	transfer	02.26cK	1C	G1.A	9,502	489	51.4	4	388	4.1%	Partial transfer
2026-09-11	transfer	02.26cK	1C	G1.A	5,223	270	51.7	5	408	7.8%	Final transfer

Source/destination counts and biomass are as entered; before/after counts per cage are not stored on the transfer record. Deaths are recorded mortality in the destination cage for that batch on the transfer date and the 7 days after. Consecutive transfers into the same cage have overlapping windows (e.g. 27-29 Jul, 26-28 Aug), so the 7-day figures are cumulative, not additive.

Campaign summary

Campaign	Fish moved	Deaths (7 d)	% moved	Reading
1C to 3D, 23 Jun (03.26b)	4,770	2	0.04%	Single transfer, 46 g fish - negligible loss
1B to 1C, 24 Jun (02.26cK)	37,000	78	0.21%	Density thinning of 24 g fish - low loss
1F to G1.D, 20-29 Jul (02.26aK)	40,443	3,021 after final	7.5%	Four partial moves at 43-45 g; losses jumped to 2,375-3,021 per 7-day window after 27-29 Jul
2C to 2D grading, 21 Aug (02.26b)	4,434	0 recorded	0.0%	Single graded move of 188 g fish - no recorded loss
1B to G1.A, 26-28 Aug (02.26cK)	26,725	1,514 after final	5.7%	Three moves at 52-60 g; plus 11,259 fish booked unaccounted the same day
1C to G1.A, 4-11 Sep (02.26cK)	37,209	408 after final	1.1%	Five moves at 51-52 g; far lower loss than the August campaign

What reduces losses: single-day moves of 24-47 g fish (Jun) and the 188 g grading lost almost nothing; multi-day partial transfers into the big circular cages (G1.D in July, G1.A in August) lost 5.7-7.5% within a week. The September 1C to G1.A campaign used the same cage and fish size as August but lost 1.1% - the difference (handling, water, feed withdrawal) is not captured. Water quality measurements and handling duration are not recorded in this database (water_quality_measurement has 0 rows), so the cause of the improvement cannot be quantified yet.
