Detailed Batch Report, 23 Aug to 23 Sep 2026 (the same table the app shows for that period). Stock, ABW and biomass are as at the end of the period; mortality, cage corrections, harvest, growth and feed are for the period; accumulated eFCR runs from stocking. Cage corrections are fish removed outside the farm (e.g. the 28 Aug 1B reconciliation loss on 02.26cK).

G1.D	02.26aK	82.9	107.5	-22.9%	37,163	131	3,081

Measured ABW is below the plan's starting ABW in 15 of 16 cages (see report 4). Plan harvest dates are therefore optimistic until the model is re-anchored to the measured weights.
